Lab 2.1 - Node Check

To be sure that Node.js is installed and it is right version for this course, run the following command in the terminal:

```
node -v
```

This should output something like the following:

A screenshot of a terminal window with a dark background. The window title bar shows "zsh" and a cursor icon. The terminal content shows the command "\$ node -v" followed by the output "v16.13.1". A new prompt "\$" is visible on the next line, indicating the command has finished executing.

As long as the first number (followed by "v") is 16, then the correct version of Node is installed for this course.
